

Module 2: FSx Assignment

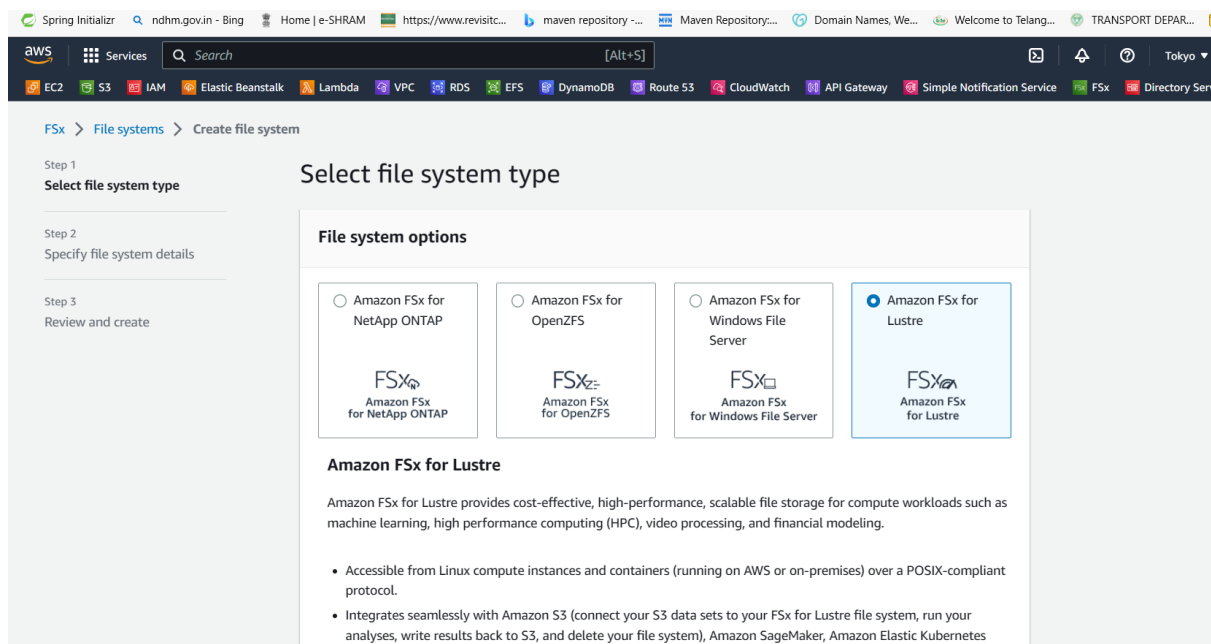

Create an FSx file system for a Windows file server:

a. Make sure you have AWS Managed Active Directory with a valid domain name

b. Connect it to your Windows EC2 server

2. Create an FSx file system for Lustre and attach it to an Amazon Linux 2 instance.

Create an FSx File System for a Windows File Server

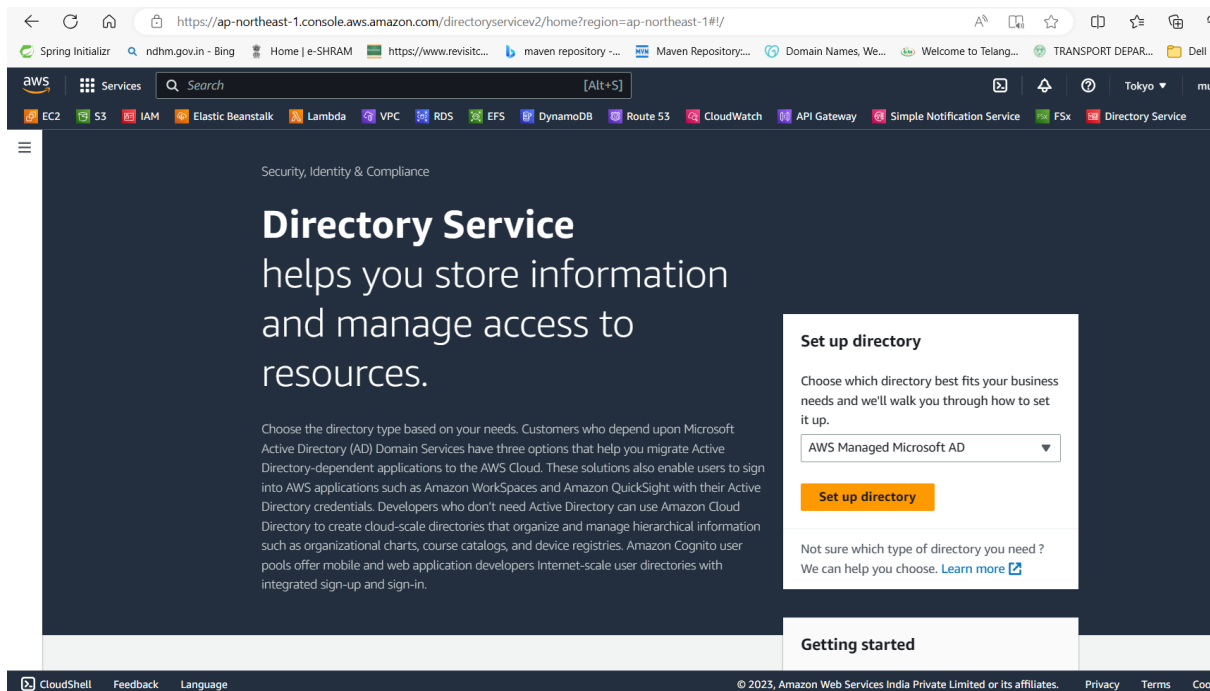

Next select Amaone FSx for lustre

Next

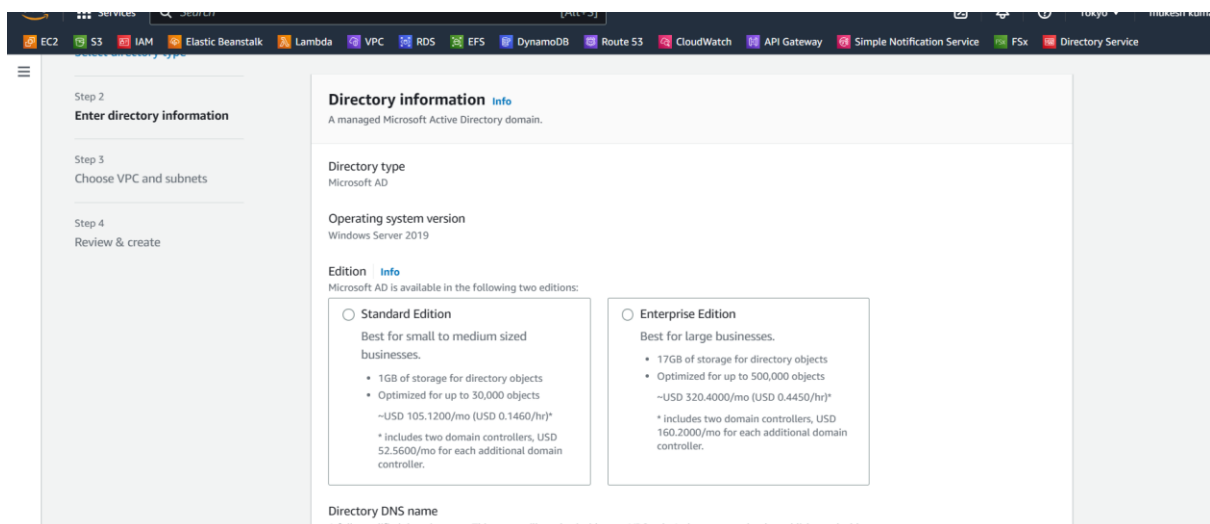

Next

Then

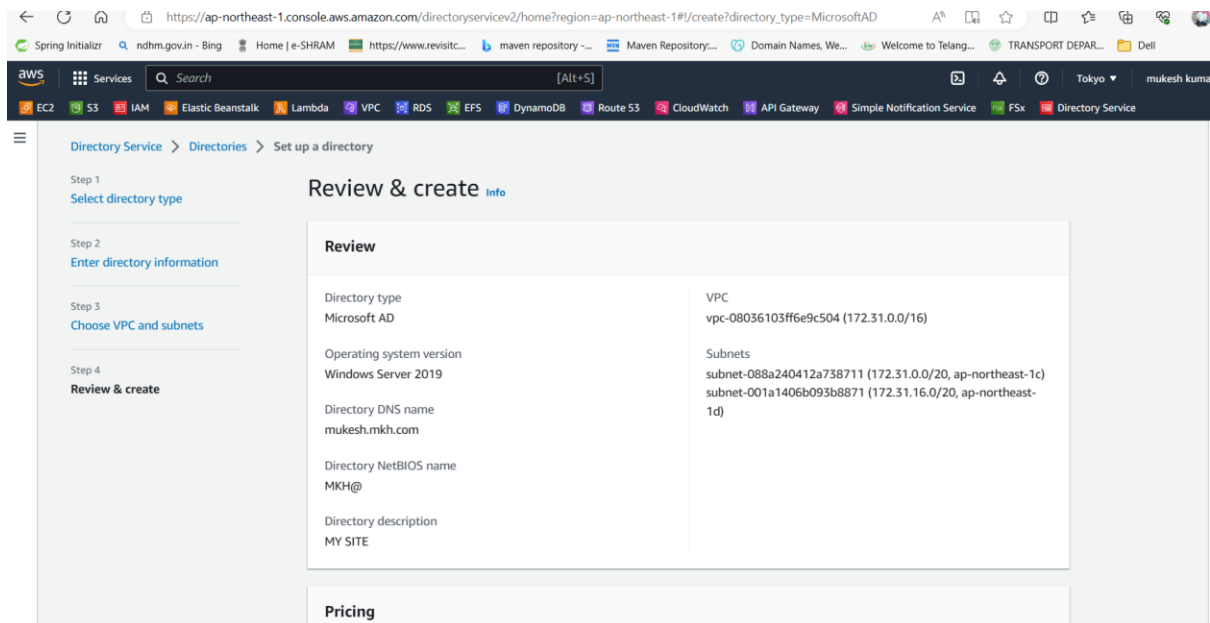

First create a aws directory service

Next

In this Edition to buy Domain and VPC ..ETC

So its price show to buy this domine so unable to contine this assignment sorry sir ,I try to check any free trier to use.

I know what next step to do sooo..just expain next step :-

Create an FSx File System for Lustre and attach it to the Amazon Linux 2 instance

Next

Create file system

Then do some configure the setting

When we create a two instance of amazon linux 2 instance check it SSH FILE

Afterwords run commands

Sudo yum update -y

Sudo yum install -y lustre -client

This two commands are packages to install in linux

Then check the file that fsx file system are connected or not in ec2 server

Completed assignment
